

Verdict for Seamless Electronic Management of Court Records

Cott Systems delivers solutions for clerk of courts and judges with Verdict--a powerful, fully-integrated and completely customized case management system developed working side-by-side with those who manage court records daily.

Verdict helps court staffers save time and work efficiently with the ability to intuitively enter, search, transmit, provide and store felony/misdemeanor, criminal, civil, probate, adoption and domestic relations case information.

Verdict provides a case management solution for both small and large offices: servers and software installed in your office or as a Software as a Service (SaaS) option where a small office needs only internet connectivity and minimal hardware.

“ My favorite thing about Cott and how they work with their customers is that they do whatever they can to accommodate individual needs.”

Giving the Public Easy Access and Delivering ecommerce Option

Using Verdict’s robust e-search capabilities, you can reach:

- County constituents
- Local law enforcement
- Local attorneys

Reduce phone inquiries, save time and -- depending on the regulations in your state -- take advantage of the e-commerce option to generate revenue by charging a nominal fee for access.

Have More Time for Critical Tasks

Verdict is completely customized to match the way you work -- resulting in offices that are more efficient at updating and sharing information electronically. Personnel can spend less time managing documents and more time meeting the other critical needs of the court.

Verdict is personalized and updated to fit each state’s electronic records management system. It works seamlessly behind-the-scenes by automating all steps of the transmit process to the state levels to save time and reduce errors.

A Central Point for Case Information

Verdict’s intuitive navigation makes it simple to find, sort and record case information for single or multiple cases. Ninety percent of common inquiries can be found on one screen to ensure minimal screen transitions -- and prevent your office from pulling paper documents.

Increase Office Efficiency

Verdict’s Docket Entry Screen makes your office more efficient with the capability to post history records and schedule court dates, books and pages, and update case/party statuses. The court calendar feature allows you to schedule cases for court. You can also easily generate notices for subpoenas, warrants, pre-trial notices and other types of court-related notices.

Input high volumes of information all entered on one convenient screen for:

- Docket entry - enter multiple filings for one specific case on one screen
- Docket entry by case - enter multiple dockets for a variety of cases on one screen
- Docket entry by range - complete one docket entry for multiple cases; load all cases and only save once to post information to all cases

Easy to Implement and Easy to Use

No matter which case -- most screens look and function similarly so learning and training staff to use Verdict is a breeze. And we are right there there with you, before, during and after the Verdict implementation process to train you, answer any questions and listen to your needs for potential future product enhancements.

Reduce the number of steps you need to complete to generate records with Verdict’s reporting functionality. Our reports are completely customized to fit the needs of your office and our event tracking feature allows you to track all the special dates you need when you run reports.

Peace of Mind

Preserve and protect official documents with Verdict’s robust security. Add Cott’s hosting service and we will ensure your records are available 24/7. Ask us and we’ll tell you how.
